ePOS Central

Multi-Site Reporting & EPOS Management

Designed for multiple outlet operators, ePOS Central offers maximum control over your EPOS terminals. Providing sales, transaction and staff analysis to aid in the management of multiple outlets from a central back office. Easy to navigate screens make product and price changes quick and simple to implement, allowing businesses to react swiftly to market demands or trends, whether it's updating menus, adding new product lines or programming new prices.

Capable of handling several hundred separate outlets EPOS Central puts you firmly in control over the point of service and delivers key business information to help make quick and timely decisions.

ePOS Central - Features at a Glance

Powerful EPOS Management: Complete control over your EPOS terminals to allow business decisions to be implemented quickly, whether it's changes to staff, menu updates, new products, price increases or systems changes.

Remote Communications: Software can be installed on or off-site allowing changes to be made from the comfort of your office wherever it may be.

Automated Report Collection: Automated report collection at the end of shift or end of day.

Business Intelligence: A selection of detailed reports to help you deliver business performance and generate greater profits.

Multiple Price Bands: Link outlets to price bands for easier price management, price files allow different prices for specific times throughout the day and different prices for days of the week.

Daily and Weekly Business Sheets: Secure control over cash and takings so shortfalls are immediately highlighted.

Clever and simple to use Menu System: Helps you to successfully run your business with minimal time and effort.

Multi Outlet Stock Management: Keep track of stock for each outlet including inter-site transfers
