### **New product launch heralds busy year ahead for international EPOS brand**

International EPOS specialist Uniwell Systems has launched the first product from a brand new range that will create a one-stop-shop for PCPOS hardware, software and EPOS peripherals.

The IX-15, launched this month, is an environmentally friendly touch screen terminal designed to overcome reliability problems associated with standard models. The product's fan-less design eradicates dust infiltration and the associated overheating problems. The energy efficient chip set and CPU reduce environmental impact and minimise running costs.

The IX-15 comes preloaded with Microsoft's WEPOS operating system that has been designed specifically for the POS market. The high spec of the machine ensures that it will run all of the leading POS software packages that are currently available in the market.

The launch heralds the arrival of Uniwell into the PCPOS market and is the first of 5 new products scheduled for release into the UK and Eire by the company this year. In addition to hardware, the company will also be supplying its own PCPOS software range.

"This is a very significant development, both for Uniwell and for hospitality EPOS in general", said Michael Hutchings, Sales and Marketing Director. "We have been serving the hospitality industry for over 20 years and, despite pressures from the industry for PCPOS, we wanted to ensure we had a truly client-focussed option before going to market."

In addition to its environmental credentials and durability, the IX-15's compact design creates a relatively small footprint, making the unit suitable for both counter and wall mounting. Its attractive appearance disguises its durability and with an IP43 rating guaranteeing resistance to liquid ingress, the unit is ideal for kitchen, bar and restaurant applications.

The IX-15 is compatible with all major operating systems and has been designed specifically for PCPOS applications. Through a comprehensive set of built-in ports the unit offers maximum flexibility and comes with the following optional peripherals:

- magnetic card reader
- dallas reader for operator login
- smart card read/writer
- biometric finger print sensor
- 2 line pole display
- 2nd customer facing LCD display
- programmable POS keyboard

February will see the launch of the company's POS Software when they will be able to offer a totally integrated PCPOS solution to coordinate the entire customer transaction from booking, through to service, back office management and key performance indicators.

All Uniwell products are available via a nationwide network of resellers that provide end to end services, from consultation and site surveys through to installation, training, field support and telephone support.

For more information on the IX-15 and Uniwell's full product range, go to [www.uniwell.co.uk](http://www.uniwell.co.uk) or call 0845 6024347.
